

ProGro is proud to announce the addition of **MOL Products** to our line of quality agronomic solutions. **MOL Products** are essential for increasing microbial life and activity which is critical for nutrient availability and uptake. This proprietary filter and pasteurization process developed by Gary Grandstaff, keeps the nutrients, sugars and carbohydrates suspended and therefore available.

I-MOL

- ◆ Restores and increases microbial activity and assists in the natural decomposition of accumulated organic matter
- ◆ Produces a rich dark green leaf
- ◆ Reduces and manages thatch

3.0 oz / 1000 every 2 weeks
Add to current spray program

MICRO-MOL

- ◆ Promotes a dark green plant color without promoting excessive growth
- ◆ Develops a complete root system which tackles summer and winter stress
- ◆ Aids and acts as a catalyst for the enzyme system by enhancing cell division
- ◆ Promotes carbohydrate and root metabolism

3.0 oz / 1000 every 2 weeks
Add to current spray program

M-MOL Manganese MOL

- ◆ Restores and increases microbial activity and assists in the natural decomposition of accumulated organic matter
- ◆ Reduces and manages thatch
- ◆ Aids in the assimilation of carbon dioxide and in photosynthesis

3.0 oz / 1000 every 2 weeks
