

# Wetting Agents

**Wetting Agents** make a significant difference in the moisture quality of the soil profile.

This in turn can have an integrated effect on the health of the soil life, improved oxygen, water movement, and improved nutrient availability.

**Progro** provides products that do the job effectively and economically.

**MATADOR** is a non-ionic wetting agent, based on innovative block polymer technology designed to establish and maintain a consistent moisture level in the root zone. It increases the rate and depth of water penetration.

## Long Term Wetting Agent

100% Akyl Block Polymer

**MATADOR** works by breaking down the hydrophobic coatings found in certain soil profiles reducing water repellency. It balances the root zone moisture conditions which: Improves oxygen levels, increases microbial activity, improves plant stress tolerance, increases plant metabolism, and increases overall plant health

**MATADOR** is safe to use on all types of turf throughout the growing season.

**Use Rate: 6.0 oz / 1000 sq ft**

**Repeat application in 14 days for season long control**

**2 x 2.5 gl case, 55 gl drum**

**Logix** is a dual active wetting agent that reduces soil surface tension and increases water penetration. The activity of Logix can improve overall soil moisture content by overcoming hydrophobic tendencies of soils, especially those high in sand and organic matter content. The soil penetrant capabilities of Logix will move water from saturated soils improving the overall moisture and oxygen content.

**Use Rate: 2.0 to 4.0 oz / 1000**

**2x2.5 gl case**

**InterChange** is a proprietary formulation that reduces soil surface tension, allowing water and nutrients to reach the root zone. Contains an organic acid that helps deal with bicarbonate issues that can create poor water infiltration by allowing water to move through heavy organic layers preventing creation of oxygen deprived soils and promotes conservation of water usage. Has an effective level of application that is ideal for injection and is cost effective.

**Turf Tabs** are a proprietary blend of polymeric surfactants, containing amino acids, and mycorrhizae designed to increase water infiltration while reducing turf stress caused by adverse environmental factors.

**Use Rate: One tablet will cover approximately 18,000 to 24,000 square feet or turf. Severity of localized dry spot, water temperature, water pressure and application technique may cause coverage to vary.**

**20 tablet case**
